

Group FORTRAN Program 7

Due Thursday November 7, 2013

The Graphing Program with linear fit plot

Add to the working program 6 point plotting program the plotting of the linear fit line of the data points.

The plot will include both the data points and the linear fit line of the data points.

Identify and use a unique character for a single data point.

Identify and use a unique character for the linear fit plot.

Identify and use a unique character for a multiple point either multiple points or multiple points and the fit point.

The fit line will have a point on each x line of the graph.
